

PLASTIC PERFORMANCE POSIDRIVE POWER

STRENGTH, PRECISION, AND RELIABILITY — NOW IN PLASTIC

The newest evolution in spiral conveyor belting. Built on the same proven, patented drive system as our metal PosiDrive Spiral, this all-plastic design delivers strength, consistency, and versatility for bakeries and frozen food producers.

With multiple sizing options, optional steel rods for heavier loads, and turn ratios as low as 1.7, it's engineered to keep products moving smoothly through proofing, freezing, and beyond. Its smooth edge design makes it a nearly universal solution for Lotension and direct drive systems alike, helping reduce waste, maintain product orientation, and simplify cleaning.

"NO SNAG" EDGE

PLASTIC POSIDRIVE SPIRAL® ADVANTAGES

ALL PLASTIC

Light weight, easy to install and repair, better product release

HORIZONTAL ENGAGEMENT

Prevents jamming at entry compared to competitors

SMOOTH EDGE

Precision drive engagement, "no snag" edge

The Ashworth Plastic PosiDrive Spiral delivers the benefits of plastic belting without the complex construction and jamming issues of competing designs. Backed by Ashworth's reputation and decades of spiral experience, it is built to perform and proven through testing.

APPLICATIONS

FREEZER

PROOFER

COOLER

PATENT PENDING
